Volume 120 1983

Contents

Stellar Structure and Evolution

Infrared photometry of southern Wolf-Rayet stars
Pitault, A., Epchtein, N., Gómez, A.E., Lortet, M.C. 53

Infrared photometry of the RS CVn binaries. I. TY Pyxidis
Antonopoulou, E. 85

The combined effect of mass loss and overshooting. III. Evolutionary scenarios for massive close binaries
Doom, C., de Grève, J.P. 97

Evolution of chemical abundances in massive stars. I. OB stars, Hubble-Sandage variables and Wolf-Rayet stars. Changes at stellar surface and galactic enrichment by stellar winds
Maeder, A. 113

Evolution of chemical abundances in massive stars. II. Abundance anomalies in Wolf-Rayet stars in relation with cosmic rays and ^{22}Ne in meteorites
Maeder, A. 130

Erratum: Evolution of Low Mass Zero Metal Stars up to the Helium Flash
D'Antona, F., Mazzitelli, I. 164

The flare activity of V780 Tau
Pettersen, B.R. 192

Linear polarization variations of six T Tauri stars
Schulte-Ladbeck, R. 203

Stellar interferometry: diameters and effective temperatures of five giant stars (Text in French)
Faucherre, M., Bonneau, D., Koechlin, L., Vakili, F. 263

The early B-type eclipsing binary FZ CMa (HD 52942): a massive triple system
Moffat, A.F.J., Vogt, N., Vaz, L.P.R., Grønbech, B. 278

Stellar Atmospheres

Spectral line profiles from spherical shells
Wagenblast, R., Bertout, C., Bastian, U. 6

Model-atmosphere analysis of high-dispersion spectra of four red giants and supergiants
Kovács, N. 21

A discussion of the infrared and radio region of the calculated spectral energy distribution of O-type stars
Groot, M., Thé, P.S. 89

Oscillator strengths and Ne abundance in B stars
Magazzù, A., Pirronello, V., Strazzulla, G. 139

The ultraviolet reddening of Be stars
Schild, R. 223

Infrared speckle imaging: improvement of the method; results on Miras and protostars
Mariotti, J.M., Chelli, A., Foy, R., Léna, P., Sibille, F., Tchountonov, G. 237

The ultraviolet spectrum of the supermassive object R 136 a. I. The mass loss rate
Feitzinger, J.V., Hanuschik, R.W., Schmidt-Kaler, T. 269

R 66 (Aeq): an LMC B supergiant with a massive cool and dusty wind
Stahl, O., Wolf, B., Zickgraf, F.-J., Bastian, U., de Groot, M.J.H., Leitherer, C. 287

Erratum: X-ray observations of single-line spectroscopic binaries
Singh, K.P., Naranan, S. 326

Galactic Structure, Stellar Dynamics

Roche's limit in a galaxy. II. The effects of rotation
Robe, H. 215

Interstellar Matter

The compact H II region S235A. Observations and interpretation
Olofsson, G. 1

The ratio of deuterium to hydrogen in interstellar space. V. The line of sight to ε Persei
Vidal-Madjar, A., Laurent, C., Gry, C., Bruston, P., Ferlet, R., York, D.G. 58

A high-latitude H I-cloud with optical emission
Goerigk, W., Mebold, U., Reif, K., Kalberla, P.M.W., Velden, L. 63

VLA observations of H_2CO in DR 21
Dickel, H.R., Lubenow, A.F., Goss, W.M., Forster, J.R., Rots, A.H. 74

Magnetic alignment of interstellar dust grains for dominating magnetic effects
Cugnon, P. 156

The Crab Nebula. I. Photoionization models of a bright filament
Péquignot, D., Dennefeld, M. 249

Detection of HCO^+ and HCN absorption towards three galactic H II-regions
Nyman, L.-Å 307

Aperture synthesis observations of Orion B at 2.695 and 8.085 GHz
Wink, J.E., Altenhoff, W.J., Webster, W.J.,Jr. 322

Galaxies and Cosmology

Gravitational lens effects of neutrino astronomical objects
Chongming, X., Xuejun, W. 15

Analysis of optical imagery for Seyfert's Sextet and VV 172
Sulentic, J.W., Lorre, J.J. 36

The evolution of shear and gravitational wave perturbations of Friedmann models and the isotropy of the Universe
Sanz, J.L. 109

Diameter distribution and Σ-D relation of SNRs in M 31 and in M 33
Berkhuijsen, E.M. 147

The formation of disc galaxies
Jones, B.J.T., Wyse, R.F.G. 165

The origin of the nonthermal radio emission in normal disk galaxies
Kennicutt, R. 219

Variability at 5 GHz in low luminosity radio nuclei of galaxies and quasars
Ekers, R.D., Fanti, R., Miley, G.K. 297

The Sun

(LE) Does the solar activity cycle extend over more than an 11-year period?
Leroy, J.-L., Noëns, J.-C. L1

The excitation of type II radio bursts in the corona
Wagner, W.J., MacQueen, R.M. 136

Stellar coronae: What can be predicted with minimum flux models?
Hammer, R., Endler, F., Ulmschneider, P. 141

Dynamical behaviour of surges
Banos, G., Dara-Papamargariti, H. 181

Short period coronal oscillations: observation and interpretation
Koutchmy, S., Žugžda, Y.D., Locăns, V. 185

Planetary Systems

Rotation properties of the high-numbered asteroids 1236 Thais and 1317 Silvretta
Schober, H.J., Schroll, A. 106

Celestial Mechanics and Astrometry

Theory for the motion of the four large planets. The solution TOP 82 (Text in French)
Simon, J.L. 197

Physical Processes and Astrophysical Plasmas

Hydrogen at high pressures and temperatures
Robnik, M., Kundt, W. 227

An exact solution for an isothermal gas cloud with fast differential rotation
Schmitz, F. 234

Instruments, Data Processing, and Numerical Methods

Gamma-ray imaging with a rotating modulator
Durouchoux, P., Hudson, H., Hurford, G., Hurley, K., Matteson, J., Orsal, E. 150

A generalized algorithm for efficient photometric reductions
Manfroid, J., Heck, A. 302

The influence of ionospheric refraction on radio astronomy interferometry
Spoelstra, T.A.T. 313
